

Use this to check the biasness of sources <https://mediabiasfactcheck.com/>

Psychological/Scientific evidence

Source (The Link next to its citation)	DOI (it is a link that proves something has been peer reviewed and archived)	Evidence collected	Date	Relivance	Biases

Government/current events

Source	Data	Organization that collected the data	Political alignment	Biases

Public records

Source	Data	Organization or place where you found the records(Online archives or library archives or ect.)	(Should NOT have any bias.)

If specific events this is where reasoning for using these sources for this topic should go and what you think the importance of these different perspectives and topics. Try to decide how many sources you want from

each different respective. For example you have 2 psychological sources, 1 source from a public record, and 2 sources from government agencies.
